

ALABAMA WATER WATCH MONITORING GROUP

The success of AWW depends on the volunteerism and commitment of **Monitoring Groups**. Hundreds of volunteer monitoring groups have sprung up around the world in the last few decades and water monitoring is the most common type of environmental assessment group. Some groups emphasize public education and awareness of watershed issues, and others focus on the collection of credible water quality data for determining watershed conditions and trends. These activities are helping people understand the importance of protecting water resources and helping them get involved in watershed management. AWW groups encourage their members to become water monitors and regularly monitor their waterbodies. Monitoring groups may also support the AWW program or the association through membership dues, gifts and services. Please carefully describe your monitoring group information, and submit this form with your first set of data taken at the site.

Monitoring Group Name: _____

Primary Contact Name: _____

Primary Contact Phone Number: _____

Group Contact Email: _____

Group Category (e.g. citizen, educator, professional): _____

Waterbody: _____

Watershed: _____

County and State where Group is based: _____

*****Do not write below this line. AWW office use only.*****

AWW Group Code Number* _____ **HUC12 Number** _____

Group Latitude: _____ **Group Longitude** _____

* the AWW office assigns a 5-digit number to each monitoring group when the above information is submitted **along with the first water monitoring data form**. The Group Code basis is the AWW historic watershed where the group identifies as home base.
